WE ARE

DIM3NSION

ENTERPRISE PORTFOLIO

//TEAM IDENTITY

WHO WE ARE

We are DIM3NSION, a STEM Racing team of six students united by a shared goal: to learn, create, and achieve the objectives we set for ourselves. Each team member contributes distinct skills and fulfills an essential role, spanning engineering, design, planning, communication, and teamwork. Through this project, we aim to develop our technical and problem-solving abilities, gain valuable hands-on experience, and strengthen our collaboration. By working together, we hope to grow both as engineers and as a high-performing team and represent our school.

OUR PURPOSE

Our goal is to make the effort and dedication we have invested throughout this four-month process truly worthwhile. We aim to achieve this not only by exploring new and unfamiliar areas, but also by applying our knowledge in practice, testing our capabilities, and challenging ourselves to grow. At the same time, we are committed to representing our school with professionalism and making the most of our team's collective strengths, collaboration, and experience.

OUR LOGO

Designed to represent our team, our logo serves as a central element of our brand identity. We wanted the mark to feature the "D" from "DIM3NSION" while preserving the distinctive "3"—formed from three lines that reference the Mandarin character for three. Through numerous iterations, developed through both hand-drawn sketches and digital explorations in Figma, we refined the concept into a minimalist symbol that combines the "D" and "3" in a clear, cohesive form. The final design allows the mark to be interpreted as the number three in both Mandarin and Spanish, reinforcing its connection to the name and the broader identity of our team.

THE TEAM

NEIZY WEN

GRAPHICAL DESIGNER

Designs Instagram content in Figma, including posts, stories, and interactive activities, while ensuring each piece aligns with our visual identity and communication goals. She also created our official team logo, capturing our identity and establishing a consistent foundation for the team's branding.

GIA CHEN

PHOTOGRAPHY AND DESIGN

Worked in marketing areas, including posts designs, social communication, among others. In addition, is responsible of capturing and documenting the team's activities, progress and achievements through photos and videos used for our Instagram page.

MIKE YAU

VIDEO EDITOR AND ANIMATOR

Is responsible for creating and editing visual content. This includes video editing, developing visual elements and creating animations. He worked on the logo's animation and sound. Collaborating with the Marketing and Photography team to develop content.

EZEQUIEL Z.

3D AND AERODYNAMICS

Focuses on some video editing but mostly on the development and aerodynamic perfomance of our car, being the only one using ANSYS to develop the 3D model. He analyzes and modifies the car's shapes and 3D design, helping with the car's structure.

CARLO HO

ENGINEER AND EDITOR

Works on the technical and visual aspects. Including the creation, design, modeling and rednering of the car, and the data analysis of simulations regarding the miniature F1. He is also one of the skilled editors behind our videos.

JOHNNY R.

MARKETING AND CO-ENGINEER

In the Marketing area, he focuses on the creative aspects of DIM3NSION. He is the creator, organizer, and manager of our Instagram page. Additionally, he worked in the design of the car using FUSION and his role as a manager of the account includes giving ideas for the videos of the account.

//MANAGEMENT

MANAGEMENT STRATEGY

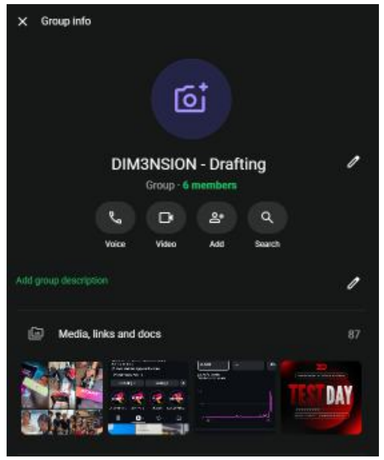
We began by recognizing each team member's strengths and assigning specific roles. This approach aligned each person with responsibilities suited to their abilities.

Some members had prior experience with modeling and technical software or academic competitions, enabling us to distribute the work more efficiently.

COMMUNICATION

Our team utilized Figma as our primary source of communication. This platform allows for multiple users to work on a design at once, perfect for collaborative projects, like our graphic design.

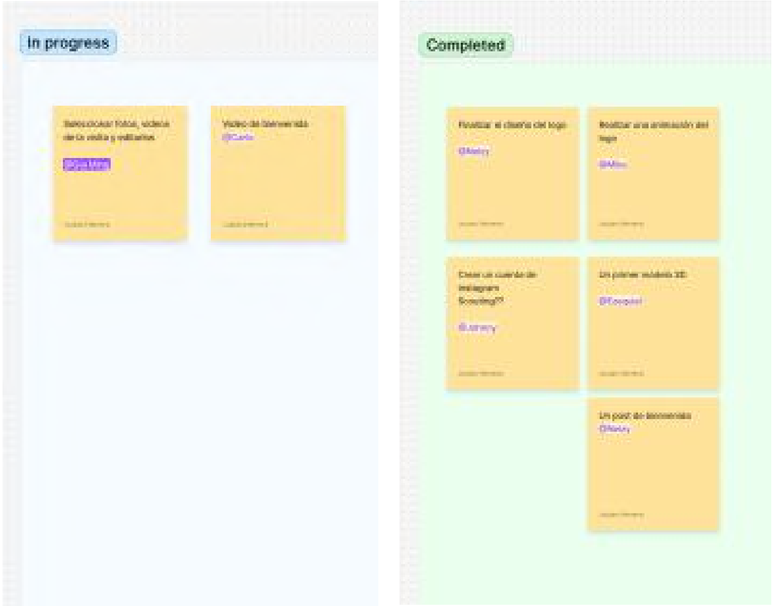
Figma's comment feature was especially useful for communicating with team members, letting each other know what changes to make.



Apart from Figma, messaging apps like WhatsApp were convenient for sharing small updates, coordinating team schedules, and assigning tasks. It provided a quick and accessible way for the team to stay aligned and manage our day-to-day communication.

On the left is our Whatsapp group, which we regurlarly used to communicate what content to post next, how our Instagram page was doing, and discuss different areas pertaining to car design and modeling.

COMMUNICATION IS THE KEY TO SUCCESS.



ORGANIZATION

Early in our journey, we used this type of schedule to keep our team organized. By outlining roles and assigning clear tasks to everyone, we managed to create a list of objectives for our team.

BEHIND OUR NAME

Our name, "DIM3NSION," reflects the three dimensions required to create a physical, functional object. It also represents our goal of creating a miniature car. Because the car will be designed in 3D, we selected the number "3" to symbolize both 3D design and the three dimensions. We aimed to create a name that is simple yet professional.

MARKETING IS ABOUT CREATING A CONNECTION WITH YOUR AUDIENCE

INSTAGRAM

The most effective way to introduce our brand to the world is through social media, which is why our Instagram page is a crucial part of our marketing strategy.

We began by introducing our team, creating short vlogs, quizzes, and behind-the-scenes content. Our focus was on developing content that would resonate with the public.

Our Instagram page provides updates on our progress while showcasing our brand's personality through engaging content.

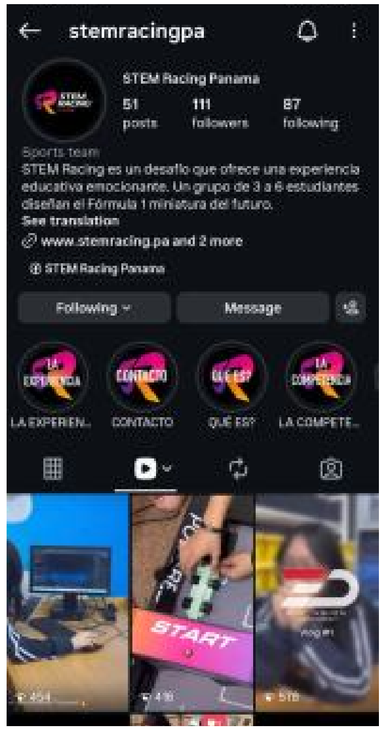
Through social media, we successfully increased awareness and helped more people discover our brand.

Recently, the account has achieved results with the content we have published. This success is attributed to the quality of the editing, complemented by the effective use of humor and the dynamic nature of the content.

CONTENT

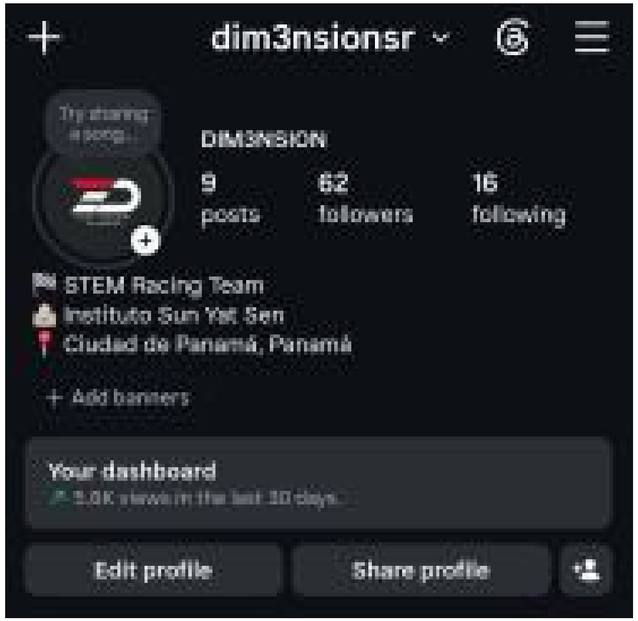
After weeks of posting social media content, our team concluded that the posts that had the most interaction were those focused on our progress and entertainment.

The picture below shows how our content got reposted on the official STEM Racing page, allowing for people to discover us.



Uploaded on October 2nd, this video became the account's most successful post by combining humor, the members' authentic personalities, and a timely viral trend. It is currently the account's most widely viewed video, generating 3,400 views within just three days—a figure that continues to increase.

Its strong performance was further supported by polished editing, effective pacing, and precise audience targeting, which helped the content reach viewers most likely to engage with it.



//GRAPHIC DESIGN

COLOR TESTS

We explored numerous color iterations before identifying the best fit. We wanted a palette that embodied our teams energy: something fast and energetic different than the rest of the competition.

COLOR PALETTE

After testing many palettes and investigating color meanings, this palette, featuring three striking colors, perfectly represents our values as a team. Red for energy, orange for creativity, and blue for integrity.

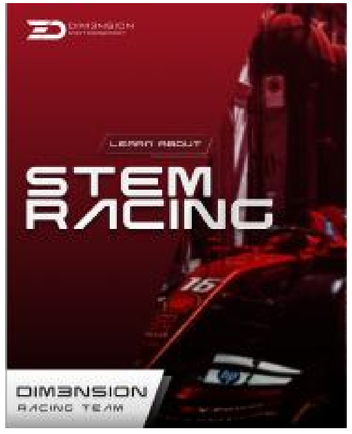
LOGO GRID

Creating a logo grid for our design helped us define the proportions, spacing, and alignment of the DIM3NSION logo, ensuring that each element was positioned consistently and accurately.

POSTS

Our social media posts were strongly inspired by luxury car posters, racing week content, and Formula 1 advertisements. These references informed ideas for our own posts, which we adapted to align with our style and brand. This process helped us establish a distinctive brand identity and increase public recognition.

The images below illustrate how we adapted these references to suit our team.



REFERENCES

We used diverse sources for our references, such as Pinterest and Pexels. Using these platforms, we were able to find inspiration for our graphic design.

//SPONSORSHIP & BRANDING

SPONSORS

A sponsor provides a team with funding, products, services, or resources in exchange for brand visibility and promotional opportunities.
For DIM3NSION, sponsors support our STEM Racing car and activities with tools, materials, equipment, or funding. We promote their brands through our car, social media, and marketing materials.

THE BEST WAY TO BUILD A BRAND IS TO BE CONSISTENT.

BRAND PERSONALITY

Our bold, innovative, and creative brand positions DIM3NSION as a team that experiments, learns, and turns ideas into meaningful outcomes. Visual communication should convey confidence, precision, and collaboration through thoughtful execution and effective problem-solving.

OUR SPONSORS

ASUS is a Taiwanese technology company that develops computers, monitors, graphics cards, and other electronics. Its high-performance products support gaming, engineering, and creative work, making it a suitable partner for DIM3NSION with laptops, workstations, and monitors for 3D car modeling, aerodynamic simulations, and graphic design.

AWS (Amazon Web Services) is a cloud platform that provides storage, computing, databases, networking, and data analysis. DIM3NSION could use AWS to manage project files, analyze performance data, and collaborate effectively without maintaining physical infrastructure. These tools could streamline our workflow and support data-driven decision-making.

Michelin works alongside team engineers on rubber compounds, surface friction modeling, and heat dissipation dynamics for vehicle components. Michelin helped DIM3NSION by providing technical knowledge and expertise in tire technology and material science, supporting our understanding of friction, performance, and engineering.

Xiaomi supported DIM3NSION by providing technology such as laptops, tablets, and smartphones to assist with car design, team communication, data analysis, and project management. Powers the team's mobile technology, supplying high-performance monitors, laptops, tablets, and smartphones for pit wall telemetry viewing and garage operations.

BEYOND THE LOGO

The DIM3NSION logo's distinctive use of the number 3 represents our core work: three-dimensional design, prototyping, and simulation. Combined with our team colors, its solid geometry creates a memorable brand that sets us apart.

BRAND RECOGNITION

DIM3NSION is recognizable through its consistent visual identity, even without its full name. Red, black, and white establish the brand palette, while the use of "3" in place of "e" create a distinctive connection to three-dimensional design and STEM Racing.
Applying these elements across our car, social media, and promotional materials strengthens brand recognition and recall.

CONTENT DESIGN SYSTEM

DIM3NSION stands out through its interactive "10 Questions Series," which helps audiences engage with STEM Racing and get to know our team. This interactive stories encourages followers to participate, and create a unique experience that sets DIM3NSION apart.
